Module Overview

Defining Infrastructure as Code

Exploring core concepts

Discovering the benefits of IaC

**Provisioning infrastructure
through software to
achieve consistent and
predictable deployments.**

Core Concepts

Defined in code

**Stored in source
control**

**Declarative or
imperative**

Declarative or Imperative

```
# Make me a taco
```

```
get shell
```

```
get beans
```

```
get cheese
```

```
get lettuce
```

```
get salsa
```

```
put beans in shell
```

```
put cheese on beans
```

```
put lettuce on cheese
```

```
put salsa on lettuce
```

Declarative or Imperative

```
# Make me a taco
food taco "bean-taco" {
  ingredients = [
    "beans", "cheese",
    "lettuce", "salsa"
  ]
}
```

Core Concepts

Defined in code

Stored in source
control

Declarative or
imperative

Idempotent and
consistent

Idempotent

Make me a
taco

Here's a
taco

Idempotent

Make me a
taco

Umm... you
have a taco

Core Concepts

Defined in code

Stored in source
control

Declarative or
imperative

Idempotent and
consistent

Push or pull

Push or Pull

Thanks!

Take this
taco

Push or Pull

Give me
the taco

Sure!

Infrastructure as Code Benefits

Reusable components

Automated deployment

Repeatable process

Consistent environments

Documented architecture

Module Summary

Infrastructure as code isn't scary

Manual processes are the enemy

When in doubt have a taco
